YOUNG CORBETT WINS FROM FERNS

Anockout in the Eleventh Round - Fight Across the River from New Orleans.

New Orleans, Jan. 25 .- Young Corformer champion, yesterday knocked out Harry Ferns of New York, in the eleventh round of a 20-round bout before the West Side Athletic Club at McDonoghville, across the Mississippi River from New Orleans. The match was at catchweights, both men weighing at between 135 and 140 pounds.

Corbett showed decided improvement over the form he displayed in his bout with Phil Brock several weeks ago. His right jabs were especially effec-

Ferns was strong in the clinches and had an even break for the first five In the sixth, Corbett landed several blows to the mouth and eye, drawing first blood. From this time on, Corbett had the better of it, landing at will. The bell probably saved Ferns in the eighth, but he took his punishment gamely and came up strong in every round. Dave Barry

LOCAL HIGH SCHOOL

The Bridgeport High school girls pasket ball team still keeps on piling like \$45,000, winning every wager he up the victories. Saturday in Win-made with Chance. Gates' losing bets ated they defeated the "Ladies" team of that town for the second time this Gates' winnings above all losses on season, by the score of 12-6. At no stage of the play were the local girls in danger of being defeated, Winsted's forwards being too well covered by Bridgeport's sturdy guards. Miss "Al" Keating of the B. H. S. was the whole three rings of the circus, throwing four backets. Miss Sullivan and Miss Kentielly also came in for one apiece. The Misses Rose and Light alternated at center, doing their part in winning the game. About twentyfive rooters accompanied the team to Winsted and cheered the locals on to victory. WALSH MUST GET BIG MONEY OR WON'T PLAY

Big Ed Walsh, the Meriden boy, and hampion pitcher of the American eague last year with 40 wins out of 55 games played, and who is to coach the Yale pitchers this season has returned his contract sent to him by Charles Comiskey of the Chicago White Sox with the request that the figures be boosted to \$6,500. Walsh wrote back to Comiskey saying: "Unless you send me a contract calling for \$6,500 I shall not play with the White Sox this year." Walsh was the main stay of the Hitless Wonders last year with the Hitless Wonders last year with the remarkable average of .727, closely followed by "Wild Bill" Donovan with the Detroit Tigers, and who formerly played with the Waterbury State league team.

HARTFORD POLO TEAM

To-light at the Brooklawn rink the Capitol City polo team of Hartford and leaders in the City League of that town will try conclusions with the All-Bridgeport team. The Hartford team contains some good players, some of whom have played in the Empire State League. Hartford is nearer to Massachusetts, then Bridgeport; the nearer to the Bay State the better the polo players. The preliminary will be open fireworks as the Yannigans and the St. Josephs clash. As both teams hall from the St. Joseph T. A. & L. society both feams will play their heads off to rim each other.

JOKES THAT HAVE BASIS OF MERIT

Here and There Among the Ball Players in Winter Time.

"I see," said Matty McIntyre, the Detroit club's great outfielder, as he unfolded his paper and began to read as the train was hitting it up between St. Louis and Chicago, "that those Chicago hydrogen who plunged on new Chicago brokers who plunged on new wheat have all been ruined." "Well," replied the logical Bill Coughlin, as he inserted a toothpick in his teeth, "new wheat has never ruin-

St. Louis fans are praying that "Rube" Waddell's constitution will withstand the strain he is imposing on it. Last week Waddell trained Small-wood, a mere matter of running some twenty miles a day; built a track at the Coliseum, acted as a sporting editor, bought a dog, took part in an all-day target shooting contest, played a game of association football and borrowed \$25 from President Hedges. This is all that has appeared in print, but they do say that the Reuben accomplished other feats besides.

Ball Player Sammy Strang shucked off his coat preparatory to a game of billiards. His shirt was a flannel creation in dark gray. "What kind of a shirt is that?" asked Charley Atherton, as he looked on the garment rather admiringly.
"Oh, that's a Marathon," replied

"A Marathon?"
"Yes, a Marathon. It can be worn
a week without showing signs of dis-

We own the water-right for power purposes on the Klondike River, a grant from the Canadian Government. This controls the power of the whole Klondike district. The power controls the mines to the amount of the difference between the cost of power produced by steam and that produced by water.

This company includes three enterprises, each of unusual profit-producing ability, and each of an exceptional safe, sound and each of an exceptional safe, sound character. The power plant is capable of producing 20,000 horse power and earning \$15,000 per day for 160 to 200 days in the year. 6,000 horse power plant will be in operation by July, 1909. The profits from the power will be over 1,200 per cent. per day, with unlimited market for the power, besides giving the same to the user at one-third of cost of steam. Klondike and its surroundings has produced over one-third of cost of steam. Klondike and its surroundings has produced over \$200,000,000 in gold with man power. With such vast bodies of gold-bearing gravels and improved machinery in saving gold where the invisible is saved as well as the visable, the field for selling power is far beyond our limit. There is four to five thousand claim owners, all of whom want power, many of them with investments well up in the millions. The famous Klondike Mines are far from being worked out. They will produce \$10 for every one they have produced up to this is no risk in this milling. No developtime.

DREDGING.

bottoms, where the miner would hot earn one dollar per day, are 30 to 40 miles long each, and ½ to ¾ of a mile wide. Dredges are taking out 40c. to \$2 per cubic yard. These river bottoms were considered worthless until the dredge man came along.

2. MILLING. While profits are not as large, the field is so extensive that the man of ambition can increase the milis to such an extent that his profits will be enormous. Milling will give a profit of such and the miles long each, and ½ to ¾ of a miles long each, and ½

Placer Mining, as conducted with gold dredges, is, beyond question, the safest form of mining to-day. Deposits that were passed up ten years ago as being too expensive to work profitable are to-day big dividend payers. Modern methods and ingenuity are responsible for this condition. In this class of mining the element of rick is entirely eliminated.

One dredge will treat two or three thousand yards per day, and do more work than 1,000 men. It can be seen, therefore, what enormus profits there are in placers running 30c. to \$5.00 per cubic Just consider a large body of gravel many millions of cubic yards that run 40c. to \$5.00 of gold per yard. Mixed with the gravel at an elevation of 200 to

with the gravel at an elevation of 200 to 300 feet above the water in the creek bed. This gravel is not rich enough to move down to the water and wash or separate the gold from the gravel. The workman is would not earn enough to pay his board. In No doubt you have seen a steam shovel work. Well, the dipper dredge is much the same, perhaps on a larger scale. The washing machine is put on the car with the shovel. The loaded dipper is swung around and emptied into the washing machine. The water is pumped up from the creek and the gold is washed or sepa-

HAS JOHNSON

an English team for an American tour,

says he can throw some light on the

plans of Jack Johnson, world's cham-

THE YUKON MILLING, DREDG- rated from the gravel. The car moves along, the gold is left in the washing machine and the sand and rocks are carried aside with an elevator. The dredge is run 6,000 h. p., 160 days, at 75c. per aside with an elevator. The dredge is run continually during the working season. Four men do the operating, 8-hour shifts (12 men in all) to a dredge. A machine of this kind takes 400 horse power to operate. A washing machine will save 150 per cent. more than the sluicing or hydraulicing method where the gold is fine, and in all dredging ground the gold is very fine.

A floating dredge is on a barge or scow, usually called a gold ship. This has an endless chain of buckets that carries or brings the gravel aboard the ship to the washing machine, where the process of separating the gold goes on, and the rocks and sand are carried off with a conveyor. A machine of this kind requires about 200 horse power and costs, set up in Klondike, about \$150,000.

MILLING. This is really a manufacturing plant. The product is gold. There is estimated to be a billion tons of this broken quartz know as White Channel in the Klondike district. It ranges in size from sand to pieces of 20 to 30 pounds, having a value by milling of over \$2.00 per ton, by sluicing 25c. to 40c. per yard. One yard weighs over 11/4 tons.

By milling the coarse gold that is caught by sluicing, the fine gold that is washed away or floats away is saved, and the gold contained in the quartz rocks is saved. Such values as this in a lode mine or ledge would not pay for mining alone, but in our plant the materials are loaded with a power shovel and run into the mill by gravity at an expense of less than 10c. per ton. The mill will pulverize 2½ tons for one from the solid quartz ledge. It is makes a high saving by amalgamation. This Company made thorough tests with a small mill. They milled over 50 tons in five-ton lots, taking over an area of five

1. HYDRO-ELECTRIC POWER. An unlimited market for all that can be pro-

duced with a profit of 1,200 per cent. per day and a saving to the user of 200 per day and a saving to the user of 200 per cent. per day, also a saving to operators who use the power of 50 per cent. in the initial cost of a dredge, mill, hoist or pumping plant in not having steam machinery to purchase and install. No credits to exceed one week, no customers to solicit, no competition, no fluctuation in markets, no business in the world safer. 2. DREDGING. It is four years since the first dredge was installed in the Klon-dike. Now there is over 20 and many

more under construction. No such a thing as a failure; all are making 300 to 400 per cent. profit. It is an absolutely safe business. How could it be otherwise. The Klondike River and Indian River bottoms, where the miner would not earn one dollar per day, are 30 to 40 miles long each, and 1/2 to 1/2 of a mile wide. Dredges are taking out 40c. to \$2 per cubic yard. These river bottoms were considered worthless until the dredge man came along.

In the last three years there has been invested in Klondike by purchasing mining property, installing machinery and other ways, over \$20,000,000. One firm has invested about \$12,000,000 and there are enterprises projected.

In lode mining the ore must first be found. To reach the ore bodies requires a vast amount of development work. Then a sunst of development work is a vast amount of development work. Then a feet the ore is found, the mechanical proposition of treating the ore, such as concentrating and smelting, entails a large expense, perhaps hundreds of thousands of dollars. About one lode mine in a hundred becomes a dividend payer. It takes time and a long time to develop the average mine and put it on a paying basis. Consider the —' of investing in the treasury 1,000,000. The average mine and put it on a paying basis. Consider the —' of investing in this kind of mining.

Still immense fortunes have been made and are being made in lode mining. The and are being made in lode mining. The conditions we start with a 6,000 horse.

Coal is of a very low grade and coals to the part of the vapt of the vapt of the vapt of the production of Alaska is greater than Montana, Utah, Colorado and Mines, \$2,000,000; Bonanza Creek Gold Still immense fortunes have been made and are being made in lode mining. The secret of success is to strike it right; you take the chance of striking it right when you invest your money in a prospect. You take a chance even in a partially developed mine where the ore is known to exist, and is proven up.

Placer deposits mining, 10c. per cubic yard, are giving handsome profits to the yard.

Technically speaking, it may not be Dear Sirs:

proper to call cleaning boilers cost of It will require three dredges 15 years daily operating. There is one day in the week lost by doing this caused by muddy son. I am at present taking power from water, and a dredge making \$1,000 profit the Dawson electric light and power per day reduces the week's profit this much, which would not occur in operacamp and an unlimited quantity almost

ting with electricity produced by water, so can be sold at remunerative prices, that the actual cost of steam is as above. Yours truly, Cost of operating the above dredge by electricity sold by the Yukon Milling, Dredging and Power Company: 200 horse-power, @ 75 per day..........\$150

Saving to dredge from cost of steam.. \$365 \$450,000 of the bonds of this Company have been already placed. The Company now offers \$500,000 additional bonds for sale.

What Others Say.

"The establishment of a large pumping plant is only possible if water power be used, as the price for generating steam is prohibitive. The Klondike River could be used for this purpose. The flow at ordinary summer level averages about 80,000 miner's inches."—Extract from the report of R. G. McConnell, Geological Survey of Canada, Vol. XIV.

Dear Sirs:

With cheap electric energy, there is a vast field for dredging purposes in the entire Klondike District.

In fact, in my own group of white channel claims I have white gravel in sufficient quantities to supply 100 stamp mill for many years, and cheap electric energy would solve the problem of extracting the combined gold content thereof from such white channel gravel.

If I can be of any further service please \$2,250,000 If I can be of any further service please

Respectfully,
Dr. Willis Eugene Everette,
Consulting Mining Geologist.

There is absolutely no question but that the installation of a properly equipped water power plant for the generating of electrical power will be a tremendous boon to the whole community. I have personally paid as high as \$8 per hour per sluice head for water pumped by the tree of the properly in the prop by the use of steam power generated by wood and coal fuel. Yours truly, M. E. Ewart,

Ex-Resident Government Architect of Dawson, Y. T. Your water power plant is just what is needed. You will be able to furnish

power so much less than with a steam plant using wood and coal, which is such expensive fuel in that country.

White Channel gravel can be milled at White Channel gravel can be milled at a profit and that profit will be greater than can be made by hydraulicking. The reason being that the gold occurs in three forms: coarse gold, very fine gold and gold held in the rocks themselves. By hydraulic methods only the first of these can be recovered, while by milling

shares of Bonus stock at 100% 1,000
Value of stock paying 100% dividend 10,000
Value of bond 1,000
Over 300% per year on the inyestment \$12,540
This is a conservative estimate, there is not a particle of risk. Subscriptions for \$100, \$500, \$1,000 or more of the bonds can be made by paying 20% down and 10% per month until paid.

The following are a few of the large. those looking for big things. The "White Channel" is known for 8 or 10 miles in length by from 2,000 to 4,000 feet wide and from 100 to 300 feet deep. The gravel is mostly quartz. The values vary somewhat in different locations, but basing my judgment upon the numerous mill runs I made I believe that it will nearly all pay a good profit to mill. In places such as Gold Hill and Last Chance the gravel has proven to be very rich indeed. Regarding the power plant proposition I would say that this I consider the greatest est opening in the Klondike for the profitable investment of capital. A number of dredges (not including those of the Yukon Gold Co.) are operating at present and are looking for cheaper power. Other dredges are contemplated, the question of power being the only thing that is preventing their immediate installation. Vast acres of dredging ground exists there, which will be worked as soon as The following are a few of the large operators and their investments at Klondike: North American Transportation & mostly quartz. The values vary sometrading Co., capital \$5,000,000, large mine operators; Bonansa Basin Dredging Co., my judgment upon the numerous mill capital \$4,000,000; Canadian Yukon Dredg-runs I made I believe that it will nearly Vast acres of dredging ground exists there, which will be worked as soon as they solve the power problem. Besides the dredges there will be mills operating

The Claim owners are very much in-terested in this Power Plant. It will increase the gold output Ten Million an-

Civil and Mining Engineer.

Dear Sirs:

Regarding cost of power I thing and stimate may be formed by considering the cost of wood, the chief source of power in the Yukon. The Yukon Government makes an annual contract for about 1,500 to 2,000 cords of wood. The best contract price I could ever get was \$10.58 per cord and its lowness was due to the fact that the North American Transportation & Trading Co. had a stock of wood on hand which it wished to get rid of, as it was giving up the wood business. I do not think wood has ever since been purchased as cheaply by the Government. I know it never was before or during my time as Governor. I think \$12 to \$15 per cord is a fair price in Dawson for dry firewood delivered. I am very familiar with the operation of the Bonanza Basin Gold Mining Company and know that their wood in the firebox on the dredge cost fully ill percord. The dredge of the company used not less than twelve cords per day, lestimate the cost of supplying power to the dredge would be not less than to the dredge would be not less than to 150 horse-power. A dredge or anything else requiring power on Eldorado Bonanza, Hunker or any other creek would certainly pay a greater price than the dredge to which I specifically referred.

For the employment of power I have In the valley of the Klondike alone there is field for a score of dredges which require power to operate them. Every crebottom will require dredges and ma valuable hills and benches will be work immediately upon steady power duri the summer season being reasonable rates. I am, dear sir,

Your very truly Jno. T. Congdon. Replying to yours of yesterday and upon examination of affairs while I was in Detroit, I find it would require twent; dredges from forty to fifty years to work our dredging ground on the Klondike

We are now operating a seven food Marion Dredge, with the electricity produced by steam. If you can furnish power at prices quoted by Mr. Wlison, viz. 4c. per K. W. it will certainly make a very large saving to us in the course of operating.

It is contemplated by our company. The Canadian Klondike Mining Co., to instal, as soon as possible, two additional dredges, as there is a large surplus of money in the treasury.

We have also large interests where pumping can be used successfully in sluicing high benched gravel. Not being an officer of the Canadian Klendike Mining Co., the main office being in Detroit, Michigan, nevertheless, I am a very large stockholder with my brothers, and Mr. Fred Rothschild is the general Manager of the company and is located at Dawson.

I must naturally speak without authority, but we will naturally be large users of your power on our properties; in fact, I believe we could use the greatest par

Very respectfully yours, Harry S. Rothschau.

Mining for placer gold has been carried on in the Klondike District for nearly eleven years. Since then that section of the Yukon Territory has been a steady producer, yielding over 120 millions of

Pumping has not been in the main a success because the cost of fuel has been so great as to make the water so expensive that none but the richest hill gravels could be worked at a profit. Anything therefore that will reduce the cost of pumping water will to the extent of that reduction make it posible to work gravel by this method that up to the incould not be worked at a profit.

Dredging is to be the great we the future in mining gold in the On the Klondike River and its tribu-taries within ten miles of Dawson there are at present seven dredges ready for work under construction. These machines are driven by steam or electricity. Electricity generated by water power will be the power of the future in that district and there is already a large market for such power and will be a much greater market in future. The nearest source for generating power is the Klondike River.

Truly yours.

Alfred Thompson,

Member of Parliament for Yukon Terri-
